Sure-Lock Hydrophobic Gripping Discs

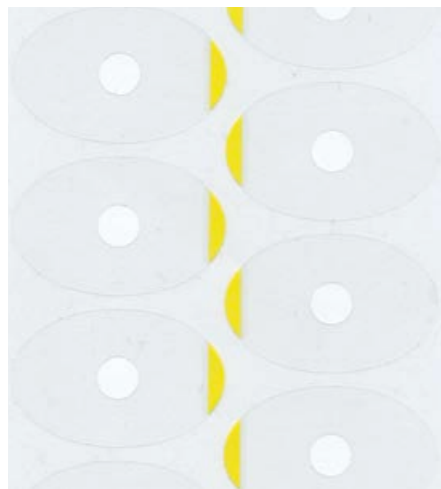

**No Slip
Sure-Lock!**

Sure-Lock Hydrophobic Gripping Discs are made of a unique material that aids in edging of lenses, including lenses with super-hydrophobic coatings. Sure-Lock is a clear film oval disc that is placed directly on the lens. The blocking pad is placed on top of the disc. Sure-Lock's adhesive provides a strong bond with the lens and a stable base for the blocking pad to adhere to without torquing. They are easily removed with the finger-lift tab provided. Sure-Lock Discs can also be used on the back side of the lens to protect the lens from the edger chuck. The transparent nature of the disk makes it easy to see layout markings underneath.

Recommended for use with Sure Mount blocking pads when using flexible blocks and ,SecurEdge or PSI's Blue Blocking Pads when using metal blocks. Available in rolls of 1,000.

Specifications:

Part #: SL2640 1,000 disks/roll 26mm x 40mm
